

Dear Mme / Sir,

via our Chinese partners we can offer

2,5-Furandicarboxylic acid (FDCA) cas#3238-40-2

The FDCA we are offering is 100% bio-based.

Capacity of the producer is currently 100MT/a but will be enlarged to 1000MT/a.

FDCA is a natural building block to produce bio-degradable polymers like Polyethylene furan-2,5-dicarboxylate (PEF) and others.

The desire of the plastic industry is to still produce plastic but make it "green" and sustainable.

Samples are available.

Please do not hesitate to contact us in case the topic of FDCA is of interest to you.

As a business concept B2C-Chemistry GmbH is representing foreign Fine Chemicals producers in Germany and other European countries. Through our partnering companies, we are offering a broad range of valuable raw material and value added intermediates, which are being used in a multitude of applications.

All our partners are experienced in custom manufacturing and deliver from gram – to kilogram – to multi-ton range.
